I wish I'd been around to stop by for the meeting--I'd have loved to close down the bar with you guys! I was off at meeting in Michigan. I'm actually writing this email from St. Paul—they have me traveling SO much! It's fun but I'm starting to get to the point that I have to think about where I am when I wake up in yet another generic hotel....

Anyway, I'm 99% sure that was data that was provided to me by the state when I asked about the modeling. So, yeah, if the state has more recent data and they'll give it to you, go ahead. I'm all about the time saver!

Hope it works out well. Sorry to stick you with more work!

Hey Jaime,

Hope things are going well. Must be nice to get your picture up on the Region 5 Intranet page.....a real celebrity. Lots of folks asked about you at our modeling meeting a couple weeks ago. Just FYI, a small group of us closed the Plymouth rooftop bar on Wednesday night. Sort of did it in your honor.

Anyway, I recently did some quick remodeling for Dan Schaufelberger. It was some USG Redwing modeling you had done that he wanted to rerun using updated stack test SO2 emissions. Pretty simple. Dan asked about rerunning using more recent met data. I noticed you ran 06-10. Was that MPCA data or did you generate that yourself? MPCA now has more recent data available so a rerun would be pretty doable. Not sure I'd have time right now to redo the met data myself.

Thanks.

Randy
